B Peptides from Bothrops insularis snake venom.",

C -1 FUNCTION: This peptide both inhibits the activity of the angiotensin-converting enzyme and enhances the action of bradykinin by inhibiting the kinases that inactivate it.

C Lacts as an indirect hypotensive agent.

DR PIR, G13196, G37196, G37196.

Hypotensive agent; Pyrrolidone carboxylic acid.

MOD RES 1 1 PYRROLIDONE CARBOXYLIC ACID.

***ARITION N.** Loow L.M.*;

***Indication and pore-forming activity of two hydrophobic more managed by the secretion of the Red sea moses sole (Pardachirus RT polypeptides from the secretion of the Red sea moses sole (Pardachirus RT marmoratus).";

***ARITION Exhibits unusual shark repellent and surfactant properties. Forms voltage-dependent, ion-permeable channels in membranes. At high concentration causes cell membrane lysis.

**C --- SUBGRIGHTR Monomer. In aqueous solution exists as a tetramer.

**C --- SUBGRIGHTR Secreted.

**C --- SIMILARITY: Belongs to the pardaxin family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ó

#Pertilization in Sepia officinalis: the first mollusk spermattracting peptide.";

Biochem. Biophys. Res. Commun. 296:1186-1193 (2002).

-I- FUNCTION: ATTRACTS SPERM INCREASING THE CHANCES OF GAMETE
COLLISION.

-I- DEVELOPMENTAL STAGE: FIRST APPEARS IN THE OVARIAN FOLLICLES FURING
VITELICGENESIS. ACCIMULATES IN THE OCCTTES BEFORE BEING SECRETED
DUNING FERTILIZATION. EXPRESSION CONTINUES IN THE EMBEDDED OCCTTE.
ACCUMULANES IN THE BGG CAPSULE AFTER FERTILIZATION.

-I- MASS SPECTROMETRY: MM-596.6; METHOD=MALDI. FMRFamide-like neuropeptide (LPLRF-amide).

L. 51 J. 8101. Chem. 275:28466-28482(2000).

C. --- FUNCTION: THIS PROTEIN BINNE DIRECTLY TO 23S RIBOSOMAL RNA.

C. --- STRUELLUTAR LOCATION: CHLOROPLAST.

C. --- STRUELLUTAR SPECIFICITY: EXPRESSED IN ALL PLANT TISSUES.

C. --- STRUILARITY: BELONGS TO THE LIDP FAMILY OF RIBOSOMAL PROTEINS.

C. --- STRUILARITY: BELONGS TO THE LIDP FAMILY OF RIBOSOMAL PROTEINS.

C. --- STRUILARITY: BELONGS TO THE LIDP FAMILY OF RIBOSOMAL PROTEINS.

\$ # # # # # # # # # # # # # # # # # # #	Novel monomeric monocyclic peptide, used to interfere with angiogenesis, or lymphangiogenesis, is produced by cyclizing a peptide loop fragment from an exposed loop of a growth factor protein by oxidizing the cysteine residues.
S X	Claim 49; Page 32; 102pp; English.
888888	The sequence represents a monomeric monocyclic peptide of the invention, whose 3-dimensional structure is modelled on the expose loop of human VEGFD (vascular endothelial growth factor). The invention relates to a method of producing a monomeric monocyclic peptide by a measuring betabeta carbon separation distances on opposite antiparallel strands of a

WPI; 2000-038791/03.

```
peptide loop fragment from an exposed loop of a growth factor protein and cyclising the peptide by oxidising the cysteine residues. The monocyclic peptides, dimeric bicyclising the cysteine residues. The monocyclic peptides dimeric bicyclic peptides with at least one amino acid deleted prior to cyclisation are used to interfere with angiogenesis, condition acid deleted prior to cyclisation or lymphangiogenesis in a mammal with a condition characterised by angiogenesis in neovascularisation or lymphangiogenesis.

The condition is diabetic retinopathy, psoriasis, arthropathy, recondition is diabetic retinopathy, psoriasis, arthropathy, creprovascular accident, post-engloplasty restenosis, head heat or cold trauma, substance-induced neovascularisation of the liver, excessive creprovascular accident, post-engloplasty restenosis, head, heat or cold trauma, substance-induced neovascular sequelae, or chronic liver sequelae, hypertension induced neovascular sequelae, or chronic liver infection. The peptides are also used to modulate vascular permeability or brain. The peptides are used to induced by vEGF. Or brain. The peptides are used to induced by vEGF. Or brain. The peptides are used to inage blood vessels and lymphatic vasculature. The monomeric and bicyclic peptides are used to interfere with at least one biological activity induced by vEGF. VEGF. Or -D and are also used in combination with an anti-inflammatory agent, to treat a discussion in the perior or present and anti-inflammatory agent, to treat a discussion in the perior or present and anti-inflammatory agent to treat a discussion or present and processed and anti-inflammatory and and architectures and and anti-inflammatory and architectures and and anti-inflammatory and architectures and and anti-inflammatory and and anti-inflammatory and and anti-inflammatory and and anti-inflammatory and anti-inflammat

The present invention describes cadherin modulating agents (MA)

comprising peptides which comprise a nonclassical cadherin cell adhesion

comprising peptides which comprise a nonclassical cadhering

cecognition (CAR) sequence. The MAs can be used for modulating

nonclassical cadherin-mediated functions. They can be used for e.g.

inhibiting adhesion of nonclassical-cadherin expressing cells in a mammal, enhancing delivery of a drug through the skin of a mammal,

can manal, inhibiting metastasis of a cancer in a mammal, inhibiting

a maiogenesis in a mammal, inducing apoptosis in a nonclassical cadherin-

expressing cell, preventing or treating obesity in a mammal, stimulating

blood vessel regression in a mammal, enhancing delivery to the

central nervous system, treating a demyelinating neurological disease,

increasing vasopermeability in a mammal. Enhancing adhesion of

nonclassical cadherin-expressing cells, inhibiting synaptic stability in

a mammal, or preventing pregnancy in a mammal. They can also be used for

c.g. enhancing or directing neurite outgrowth, facilitating wound healing

or reducing scar tissue, or enhancing adhesion of foreign tissue in a

mammal. They can also be used for treating e.g. psoriasis, arthritis, age

related macular degeneration, multiple sclerosis and diabetes. The

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present invention describes cadherin modulating agents (MA) comprising peptides which comprise a nonclassical cadherin cell adhesion cereognition (GAR) sequence. The MAS can be used for modulating nonclassical cadherin—mediated functions. They can be used for e.g. inhibiting adhesion of nonclassical-cadherin expressing cells in a mammal, enhancing delivery of a drug through the Skin of a mammal, enhancing delivery of a drug though the Skin of a mammal, and mammal inhibiting metastasis of a cancer in a mammal, inhibiting metastasis of a cancer in a mammal, inhibiting metastasis of a cancer in a mammal, inhibiting cells, preventing or treating obesity in a mammal, stimulating carpression in a mammal, enhancing delivery to the central nervous system, treating a demyelinating neurological disease, increasing vasopermeability in a mammal. They can also be used for conclassical cadherin—expressing cells, inhibiting synaptic stability in a mammal. They can also be used for treating e.g. psoriasis, and in bioreactors.

Any of the can also be used for treating e.g. psoriasis, and in bioreactors. Any of the conclassical and adhesion and diagnosis and in bioreactors. Any of the conclassical and Any 13188 represent sequences used in the conclassical and any of the conclassical cadherin—expressing mammal. They can also be used for detection and diagnosis and in bioreactors. Any of the conclassical the conclassical cadherine specifically claimed peptides, and cadherine specifically claimed peptides and cadherine cadherine cadherine cadherine cadherine cadherine cadherine cadherin
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             0
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Modulation, nonclassical cadherin mediated cell adhesion; CAR; inhibition; cadherin extracellular domain; cell adhesion recognition; OB-cadherin; cadherin-5; cadherin-6; cadherin-7; cadherin-12; cadherin-14; cadherin-15, T-cadherin; PB-cadherin; cadherin, cadherin; desmocollin; calcium binding; cancer; tumour; obesity; rheumatoid arthritis; multiple sclerosis; diabetes; metastasis; neurological disease; cyclic.
                                                                                                                                                                                                                                                                                                                                           New cadherin modulating agents, used for modulating nonclassical cadherin -mediated functions for treating e.g. cancers, obesity, rheumatoid arthritis, multiple sclerosis, diabetes or a neurological disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      PB-cadherin cell adhesion recognition cyclic peptide SEQ ID NO:4046.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             .

The present invention describes cadherin modulating agents (MA)

Comprising peptides which comprise a nonclassical cadherin cell adhesion

comprising peptides which comprise a nonclassical cadherin cell adhesion

comprision (CAS) sequence. The MAS can be used for engine in the conclassical cadherin-mediated functions. They can be used for e.g.

Inhibiting adhesion of nonclassical-cadherin expressing cells in a mammal, enhancing delivery of a trung through the skin of a mammal, challing metastasis of a cancer in a mammal, inhibiting metastasis of a cancer in a mammal, inhibiting angiogenesis in a mammal, inducing apoptosis in a mammal, inhibiting confersion of the capression in a mammal, enhancing delivery to the capression in a mammal, enhancing delivery to the contral nervous system, treating a demyelinating neurological disease, increasing vasopermeability in a mammal. They can also be used for a mammal. They can also be used for treating e.g. psoriasis, arthritis, age creducing sear tissue, or enhancing adhesion of foreign tissue in a mammal. They can also be used for treating e.g. psoriasis, arthritis, age creducing sear tissue, or enhancing adhesion of foreign tissue in a mammal. They can also be used for treating e.g. psoriasis, arthritis, age creducing sear tissue, or enhancing adhesion of foreign tissue in a mammal. They can also be used for detection and diagnosis and in bioreactors.

ANG6552 to ANG6552 represent specifically claimed peptides, and the ANG851181 to ANG6552 and diagnosis and in bioreactors.

ANG6552 to ANG6653 to ANG6552 represent specifically claimed peptides, and the ANG8550 to ANG6550 the ANG6550 to ANG6550 the ANG6550 to ANG6550 to ANG6550 the ANG6550 to ANG6550 the ANG6550 to ANG6550 the ANG6550 to ANG6550 the A
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present invention describes cadherin modulating agents (MA)

Comprising Peptides which comprise a nonclassical cadherin cell adhesion

comprising Peptides which comprise a nonclassical cadhering expension (CRR) sequence. The MAS can be used for e.g.

comprising adhesion of nonclassical-cadherin expressing cells in a nonclassical cadherin-mediated functions. They can be used for e.g.

comprising adhesion of nonclassical-cadherin expressing cells in a mammal, enhancing delivery of a drug the atumour in a mammal, treating cancer in a mammal, inhibiting or treating apoptosis in a mammal, inhibiting or treating or treating obesity in a mammal, inhibiting cell, preventing or treating obesity in a mammal, inhibiting scar, to the captressing cell, preventing or treating demylinating neurological disease, central nervous system, treating a demylinating neurological disease, central nervous system, treating a demylinating neurological disease, central nervous system, treating cells, inhibiting synaptic stability in nonclassical cadherin-expressing cells, inhibiting synaptic stability in a mammal, creating admension of forcign tissue in a correducing or a frecting neurite outgrowth, facilitating wound healing cer reducing scar tissue, or enhancing adhesion of forcign tissue in a credited macular degeneration, multiple sclerosis and diabetes. The products can also be used for detection and diagnosis and in bioreactors.

companies and also be used for detection and diagnosis and in bioreactors.

companies and also be used for detection and diagnosis and in bioreactors.

companies and conference of the present specifically claimed peptides, and payeds.

contral exemplification of the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New cadherin modulating agents, used for modulating nonclassical cadherin -mediated functions for treating e.g. cancers, obesity, rheumatoid arthritis, multiple sclerosis, diabetes or a neurological disease.

The present invention describes cadherin modulating agents (NA)

CC comprising peptides which comprise a nonclassical cadherin cell adhesion

C recognition (ORA) sequence. The MAs can be used for eage

conclassical cadherin-mediated functions. They can be used for e.g.

conclassical cadherin-mediated functions. They can be used for e.g.

cc inhibiting adhesion of nonclassical-cadherin expressing cells in a mammal, enhancing delivery of a drug to a tumour in a mammal, treating canner in mammal, inhibiting any operation of a cancer in a mammal, inhibiting any operation of a cancer in a mammal, inhibiting any calls, preventing or treating obesity in a mammal, stimulating conversesing cell, preventing or treating obesity in a mammal, stimulating central nervous System, treating a demyelinating neurological disease, central nervous System, treating a demyelinating neurological disease, contral nervous System, in a mammal, enhancing adhesion of nonclassical cadherin-expressing cells, inhibiting synaptic stability in neurological disease, nonclassical cadherin-expressing cells, inhibiting synaptic stability in mammal
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         a mammal, or preventing pregnancy in a mammal. They can also be used for e.g. enhancing or directing neurite outgrowth, facilitating wound healing or reducing scar tissue, or enhancing adhesion of foreign tissue in a mammal. They can also be used for treating e.g. psoriasis, arthritis, age mammal. They can also be used for the scar and diabetes. The products can also be used for detection and diabetes and proceducts can also be used for detection and diabetes.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      AAY60592 to AAY64572 represent specifically claimed peptides, and AAY64573 to AAX64643 and AAZ33183 to AAZ33186 represent sequences used in the exemplification of the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                New cadherin modulating agents, used for modulating nonclassical cadherin -mediated functions for treating e.g. cancers, obesity, rheumatoid arthritis, multiple sclerosis, diabetes or a neurological disease.
                                                                                                                                                                                                                                            Modulation; nonclassical cadherin mediated cell adhesion; CAR; inhibition; cadherin extracellular domain; cell adhesion recognition; OB-cadherin; cadherin-5; cadherin-6; cadherin-7; cadherin-7; cadherin-15; cadherin-16; T-cadherin; PB-cadherin; protocadherin; cadherin-16; T-cadherin; pB-cadherin; protocadherin; democratical receptor; LI-cadherin; protocadherin; cadherin; calcium binding; cancer; tumour; obesity; rheumatoid arthritis; multiple sclerosis; diabetes; metastasis; neurological disease; cyclic.
                                                                                                                                                                             Cadherin-related neuronal receptor CAR cyclic peptide SEQ ID NO:3573.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Claim 102; Page 217; 252pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Location/Qualifiers
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  (ADHE-) ADHEREX TECHNOLOGIES INC.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention provides synthetic antiinflammatory peptides derived from interleukin-2 (IL-2). They can be used for inhibition of adhesion of activated T-cells to ECM proteins such as fibromectin, laminin, collagen type-IV; inhibition of chemotractic migration of T-cell through ECM proteins preferably fibromectin; inhibition of exportance or mitogen induced T-cell proliferation; inhibition of spontaneous or induced, induced T-cell and intestinal epithelial cells. The anti-inflammatory estimaled T-cells and intestinal epithelial cells. The anti-inflammatory peptides and their derivatives are useful for preparing compositions for peptides and their derivatives are useful for preparing compositions for treating and/or allevating chronic or acute inflammatory disorders and their sciences; systemic lupus erythematosus, bowel inflammation, computing and crohm's disease. Sequences ANY85366-374 represent modified untillammatory derivative peptides derived from the IL-2 derived anti-cell inflammatory peptide pept (AAX85363)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Synthetic antiinflammatory peptide derived from IL-2 and its derivatives useful for treating inflammatory autoimmune diseases such as rheumatoid arthritis, multiple sclerosis and systemic lupus erythematosus.

The present invention describes cadherin modulating agents (MA)

CC comprising peptides which comprise a nonclassical cadherin cell adhesion

C recognition (CAR) sequence. The MAs can be used for modulating

recognition (CAR) sequence. The MAs can be used for modulating

conclassical cadherin-mediated functions. They can be used for e.g.

conclassical cadherin-mediated functions. They can be used for e.g.

conclassical adhesion of nonclassical-cadherin expressing cells in a mammal, enhancing delivery of a drug to a tumour in a mammal, treating cancer in a mammal, inhibiting metastasis of a cancer in a mammal, inhibiting cc ampressing cell, preventing or treating obesity in a mammal, stimulating capressing in a mammal, enhancing delivery to the correasing vasopermeability in a mammal, enhancing delivery to the increasing vasopermeability in a mammal. They can also be used for conclassical cadherin-expressing cells, inhibiting synaptic stability in a mammal. They can also be used for conclassing and diabetes. The related macular degeneration, multiple sclerosis and in bioreactors.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            New cadherin modulating agents, used for modulating nonclassical cadherin-mediated functions for treating e.g. cancers, obesity, rheumatoid arthritis, multiple sclerosis, diabetes or a neurological disease.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The present invention describes cadherin modulating agents (MA) comprising peptides which comprise a nonclassical cadherin cell adhesion recognition (CAR) sequence. The MAs can be used for modulating nonclassical cadherin—mediated functions. They can be used for e.g. inhibiting adhesion of nonclassical-cadherin expressing cells in a mammal, enhancing delivery of a drug through the skin of a mammal, enhancing delivery of a cauge through the skin of a mammal, and inhibiting a mammal, inhibiting an aningly of a cancer in a mammal, inhibiting aningly and aningly and an aningly and an inhibiting expressing cell, preventing or treating obesity in a mammal, stimulating expressing cell, preventing or treating obesity in a mammal, stimulating

                                                                                                                                                                                                                                                                                                                                                                      RESULT 9
AAY62488
```

```
blood vessel regression in a mammal, enhancing drug delivery to the central nervous system, treating a demyelinating neurological disease, increasing vasopermeability in a mammal, enhancing adhesion of monclassical cadherin-expressing cells, inhibiting synaptic stability in a mammal, inhibiting synaptic stability in a mammal, or preventing pregrancy in a mammal. They can also be used for a mammal. They can also be used for treating edhesion of foreign tissue in a correducing scar tissue, or enhancing adhesion of foreign tissue in a mammal. They can also be used for treating e.g. psoriasis, arthritis, age related macular degeneration, multiple sclerosis and diabetes. The related macular degeneration, multiple sclerosis and diabetes. The ARX60592 to AAX64572 represent specifically claimed peptides, and AX33188 to AAX64573 to AAX64531 to AAX33188 represent sequences used in the exemplification of the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present sequence is a peptide fragment derived from domain 1 of human beta-2 glycoprotein, a phospholipid binding serum protein. Isolated domain 1 of beta-2 GPI protein binds to and inhibits beta-2 GPI-dependent antiphospholipid antibodies. The fragments are useful as toleragens when they bind to the antibodies at the surface of a B cell and triggers B cell anergy. The polypeptides and mimetics can be used for treating disorders associated with beta 20PI-dependent aPL-associated pathologies, e.g. thrombosis, recurrent foetal loss, thrombosytopenia or autoimmune diseases such as systemic lupus erythematosus. The polypeptides can also be used to detect and purify antibodies. They can also be used in
                                                                                                                                                                                                                                                                                                                                                                                         ö
                                                                                                                                                                                                                                                                                                                                                                                             Gaps

Peptides given in AAR49741-75, AAR49777-78 and AAR49785-88, which include a family of tetrapeptides based on the recognition site (AAR49776) of farnesyltransferase (FT), are potential anticancer agents that inhibit FT, thereby preventing expression of p21ras. (Updated on 25-MAR-2003 to correct PN field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                         New farnesyl-transferase inhibitors - used for inhibiting attachment of a farnesyl moiety to a p21ras protein in malignant cells.
                                                                                                                                Farnesyltransferase-inhibitor; farnesyltransferase; FT; p21ras; ras protein; farnesylation; cancer therapy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Farnesyl transferase; inhibitor; cancer; ras; p21.

They show FT inhibition at an ICSO of 0.01-10 micros. The most potent inhibitors are ones in which phenylalanine occurs at the third position of a crespic whose N-terminus is cysteine. The inhibitors have a farnesylacceptor or inhibitor sequence within its structure and are capable of inhibiting the farnesylation of p21ras by FT. See also AAR14711-23 and AAQ14541-47.                                                                                                                                           ARK77800, AAR77805-R77838 are tetrapeptide inhibitors of farnesyl transferase. They all obey a generic formula for the C-terminal sequence of 4-10 amino acid inhibitory peptides; the formula is -CAAX, where C=cysteine, A= any aliphatic, arcmatic or hydroxy amino acid and X= any normal amino acid. Farnesyl transferase is involved in the farnesylation of various cellular proteins including the cancer related ras proteins. The transforming activity of ras is dependent on the localisation of the protein to membranes, a property which is thought to be dependent upon the addition of farnesyl groups. The peptide inhibitors are useful for the activity and ras-related cancers in particular. (Updated on 25-MAR-2003 to correct PF field.)
                                                                                     New farnesyl transferase inhibitor peptide(s) - based on farnesyl acceptor substrate carboxy terminal sequences, used for the treatment of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Assay for farnesyl transferase activity - by determining ability to transfer farnesyl molety to K-Ras B protein, partic. useful for identifying inhibitors.

This sequence represents an analogue peptide of the Hepatitis C virus (HCV) nucleocapsid core protein. The invention relates to peptide analogues derived from HCV proteins, e.g. ANWGATI-WGYAG, which can be used for the determination of anti-HCV antibodies in a sample. Preferably the peptide analogues contain one or more thioamide peptide bonds where at least one oxygen atom of the peptide bond is replaced by sulphur atom. The peptide analogues can be adsorbed or chemically bound to a carrier
                                                                                                                                                                                                                                                                                                                                          ò

AAW04433-W04465 are peptide inhibitors of farnesyl transferase (FT) activity. The peptides block the attachment of prenyl groups to ras proteins in malignant cells of patients suffering from cancer or a precancerous state and as such are used to treat cancer. The peptides were identified by determining the ability of candidate substances to inhibit a FT enzyme, by inhibiting the transfer of a farnesyl moiety to
                                                                                                                                                                                                                                                                                                                                            Gaps

Patent No. 6358920

GENERAL INFORMATION:
APPLICANT: Blaschuk, Orest W.
APPLICANT: Blaschuk, Corest W.
TITLE OF INVENTION: COMPOUNDS AND METHODS FOR MODULATING NONCLASSICAL
TITLE OF INVENTION: COMPOUNDS AND METHODS FOR MODULATING NONCLASSICAL
TITLE OF INVENTION: COMPOUNDS AND METHODS FOR MODULATING NONCLASSICAL
TITLE REFERENCE: 100086, 40701.
CURRENT APPLICATION NUMBER: US/09/187,859A
CURRENT FILING DATE: 1998-11-06
NUMBER OF SEQ ID NOS: 4052

SEQ ID NOS: 4052

SEQ ID NOS: 4052

Starratt A.N., Brown B.E.;
"Structure of the pentapeptide proctolin, a proposed neurotransmitter
-!- COFACTOR: Pyridoxal phosphate.
-!- PATHWAY: Biotin blosynthesis.
-!- STRUNTY: Mondimer.
-!- SIMILARITY: Belongs to class-III of pyridoxal-phosphate-dependent aminotransferases.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 SPECIES-P. americana; MEDLINE-81225865; PubMed-6113690; O'Shea M., Adams M.E.; Pubmed M.E.; Pertrapeptide (proctolin) associated with an identified neuron."; Science 213:567-569(1981).
